Introduction

The secRMM Excel AddIn is a “Microsoft Office Excel Document AddIn”. It works with all versions of Office from Office 2010 or better. Using Excel against the secRMM event log data makes it easy to analyze the data interactively and to create reports. The secRMM Excel AddIn can be used to view the secRMM event log data for just a single computer or for all the systems running the secRMM solution (i.e. secRMMCentral) in your environment.

The “Microsoft Office Excel Document AddIn” technology is provided by Microsoft to allow their Office suite to be customized to meet a specific task. It is a very powerful Microsoft technology. If you follow the steps in this document, it should take no more than 20 minutes to be up and running.

Please follow the steps in the next section to begin the installation.

Installation

If you have not already done so, please install Excel 2010 or better. The secRMM Excel AddIn uses 2 Excel features. The next section shows you how to check if the 2 features are installed and if not, how to add them to your Excel installation.

Update for Note below: Some of our customers have successfully used the secRMM Excel AddIn using Office 32-bit on their x64 machines. If you are using the 32-bit version of Office on a x64 machine, please feel free to contact Squadra Technologies support and we will help you with the setup. It turns out that a single 32-bit dll (secRMM10.dll) needs to be copied to a directory on your computer to make this work.

To figure out where to copy the 32-bit secRMM10.dll, in the secRMM Excel AddIn, click the “About” button as shown in the screenshot below.

The “About” button will show you the directory where you need to copy the 32-bit secRMM10.dll as shown in the screenshot below.
Note: If your Windows Operating System is 64bit, you must make sure that you install the 64bit version of Office Excel. Microsoft does not support Office AddIns under 32 bit emulation mode. To check this, find the program named excel.exe. If it is under the “Program Files” directory, then you are running the 64bit version. If it is under the “Program Files (x86)” directory, you will need to uninstall this version and install the 64bit version of Office.

**Required Excel features**

The following 2 Excel features must be installed in addition to the base Excel product:

1. “.Net programmability support” and
2. “Visual Basic for Applications”

Note: “.Net programmability support” is a default feature so if it is not installed, you should check with your security department as to why it has been disabled intentionally before you enable it.

Note: “Visual Basic for Applications” is not used by the secRMM Excel AddIn, however, it is required by the Excel AddIn Framework.

**Start Excel in Administrator Mode**

Whenever you want to use the secRMM Excel AddIn, you must start Excel using “Run As Administrator” mode. The easiest way to do this is to execute a “Command Prompt” session using “Run As administrator”. To get the “Run as administrator” option displayed, right mouse click on the “Command Prompt” menu item.
1 - Invoke the "Command Prompt" in "Run as administrator" mode

From the “Administrator: Command Prompt”, run EXCEL.EXE.

2 - Calling EXCEL.EXE from a "Command Prompt" in "Run as administrator" mode

Once Excel is open, perform the following steps below. You only need to perform these steps one time. In other words, when you close Excel and then open it again, the settings you set in the steps below will be set.
Set Excel security settings

From the “Excel File” menu, select “Options”.

3 - Excel Options
From the “Excel Options” menu, select “Trust Center”.

### Excel Trust Center Settings

Click the “Trust Center Settings…” button in the lower right hand corner of the “Excel Options” window.

**Excel Trusted Locations**
From the “Trust Center” Options menu, select “Trusted Locations”.
You have to save the excel file for secRMM (named secRMMExcelWorkbook.xlsx) to one of the paths in the “Trusted Locations” list. So you can either add a new path (by clicking the “Add new location…” button) to the trusted locations list or just use one of the existing trusted locations paths already in the trusted locations list. Remember the path you chose in this step because when you download the secRMMExcelWorkbook.xlsx Excel file from the Squadra Technologies web site (performed in a step below), you will want to save it to the path you chose in this step.

One very important decision about selecting the “Trusted Locations” path for the secRMMExcelWorkbook.xlsx is integration with the secRMM Microsoft Management Console (MMC). If you add your “Trusted Locations” path as the AdminUtils subdirectory of secRMM (if you installed secRMM to the default directory, this will be C:\Program Files\secRMM), then you can directly launch the Excel (and the secRMM Excel AddIn) right from within the secRMM MMC. Therefore, you will add C:\Program Files\secRMM\AdminUtils to the Excel “Trusted Locations”. This is shown in the screenshot below.
Figure 8 - Integrating the secRMM Excel AddIn into the MMC Console

Excel Macro Settings
From the “Trust Center” Options menu, select “Macro Settings”.

- Ensure the check box for "Trust access to the VBA project object model" is checked.

Dev. Macro Settings

- "Trust access to the VBA project object model" checked.
You have to check “Trust access to the VBA project object model” last checkbox on “Macro Settings” tab. The secRMM Excel AddIn does not use VBA Macros but the Excel AddIn Framework does.

Once you have performed the steps above, exit Excel (this will save the changes you just made). Now start Excel again in Administrator mode to perform the steps in the next sections.

Download the xlsx file from the Squadra Technologies web site

On this web page, please fill in your email and click submit. You will be redirected to the download page. On this page, please click the “Additional optional downloads”. On that page, click the “secRMMExcelAddIn” link. You will now be on the secRMM Excel AddIn download page. Download the Excel Workbook into the path you specified in the “Excel Trusted Locations” section above.

Please select a link(s) from the list below.

11 - secRMM Excel AddIn web site download page

Opening secRMMExcelWorkbook.xlsx for the first time

When you open the secRMMExcelWorkbook.xlsx for the first time, the Excel program will need to install the Microsoft Office Excel AddIns.

Microsoft Office Excel AddIns use the following Windows components:

1. Microsoft .NET Framework 4.5 (x86 and x64)
2. Microsoft Visual Studio Tools for Office Runtime (x86 and x64)

You will see the following screenshots below. Don’t worry if one of the screenshots is not shown for your installation, this means that the Windows component is already installed on your computer.
Installing Microsoft .NET Framework 4 Client Profile (x86 and x64)

MICROSOFT SOFTWARE SUPPLEMENTAL LICENSE TERMS

MICROSOFT .NET FRAMEWORK 4 FOR MICROSOFT WINDOWS OPERATING

Do you accept the terms of the pending License Agreement?

If you choose Don’t Accept, install will close. To install you must accept this agreement.

[Accept] [Don’t Accept]
13 - Installing Microsoft Visual Studio Tools for Office Runtime (x86 and x64)

If you get this window, reboot the computer by clicking the Yes button.

14 - Reboot dialog if no .NET 3.5 found

If you get this window, reboot the computer by clicking the Yes button.
15 - Restarting install after reboot

16 - Download from web site
Starting Microsoft Office Customization Installer

Installing Office customization

Downloading customization files... (0.33 of 0.33 MB)
18 - Installation progress bar

19 - Successful installation message

Initializing secRMMExcelWorkbook.xlsx

If the secRMMExcelWorkbook.xlsx opens in “Protected View”, please click the “Enable Editing” button.

20 - Enable Editing within Excel

The secRMMExcelWorkbook will now initialize. Once the secRMMExcelWorkbook completes its initialization, row 2 of the active Worksheet will have the secRMM header and the secRMM Ribbon (toolbar) will be displayed above the Worksheet area. You are now ready to begin using the
secRMM Excel AddIn Administrator Guide

secRMMExcelWorkbook. Please continue on to the section below titled “Using the secRMM Excel AddIn”. If you do not see the secRMM header in row 1 of the active Worksheet and/or you do not see the secRMM Ribbon, please review the Troubleshooting section directly below.

21 - secRMM Excel Workbook initialized

Troubleshooting

Use the installed programs list to ensure the following are in the list.

22 - Installed components

23 - Missing .NET Framework 4.5

If you receive the message above, you need to install the .Net 4.5 Framework.
24 - Missing entry in the Excel Trust locations

If you receive the message above, you have not added the path where the Excel file secRMMExcelWorkbook.xlsx is to the Excel Trust locations.

25 - Missing “Trust access to the VBA project object mode” Excel security setting

If you receive the message above, you have not enabled the “Trust access to the VBA project object model” Excel security setting.

**Uninstalling**

If you need or want to uninstall the secRMM Excel AddIn, you can do so from the Control Panel->Add/Remove Programs as shown below.
If you later decide to reinstall, you will first need to clear the Microsoft Office AddIn cache. To clear the Microsoft Office AddIn cache, open a CMD window in Administrator mode and type: `rundll32 dfshim CleanOnlineAppCache`. Now perform a fresh install.

Using the secRMM Excel AddIn

Security considerations

The secRMM Excel AddIn populates the worksheet by reading the data out of the secRMM or secRMMCentral event log. This is important to remember because only Administrators are allowed to read this data. Therefore, you must always start Excel under “Run As Administrator” mode and your Windows userid must be in the Administrators group on the computer where the secRMM event log resides. Failure to do this will prevent access to the secRMM and/or secRMMCentral event logs. While this may seem inconvenient, it prevents non-Administrator users from accessing the secRMM events.

secRMM Excel AddIn Ribbon (toolbar)
This section will describe the features available in the secRMM Ribbon. The secRMM Ribbon contains all of the additional functionality provided by the secRMM Excel AddIn. In addition, you have access to all of the functionality provided by Excel (filtering, searching, reporting, etc.).

The functionality provided by the secRMM Ribbon is divided into 4 major groups:

1. Data source
2. Control
3. Administration
4. Filter

Each group is described in the sections below.

**Data source**

The secRMM Ribbon Data source group allows you to view secRMM event data for a single computer (secRMM event log) or to view secRMM event data for multiple computers (secRMMCentral event log). Viewing secRMM event data for multiple computers means that you are viewing data from the secRMMCentral event log. The secRMMCentral event log contains secRMM events from multiple computers running the secRMM product. For details on secRMMCentral, please download the secRMMCentral Administrator Guide from the Squadra Technologies web site. You can also view archived secRMM and/or secRMMCentral archive files.

You can also connect to Microsoft System Center Configuration Manager (SCCM) to view the secRMM “status messages”.

**secRMM Checkbox**

Checking this checkbox will make the secRMM Excel AddIn look at the secRMM event log on the computer that it is currently connected to.

**secRMMCentral Checkbox**

Checking this checkbox will make the secRMM Excel AddIn look at the secRMMCentral event log on the computer that it is currently connected to.
Archive Checkbox

Checking this checkbox will allow you to open a secRMM or secRMMCentral event log as shown below. You can select as many archive files as you want using the Ctrl-Click on each file you want or Ctrl-A to select all the evtx files in a directory.

![File Open dialog](image)

Figure 29 - archived event log file

SCCM Status Messages Checkbox

Checking this checkbox will make the secRMM Excel AddIn look at the SCCM status messages for secRMM. The computer running the secRMM Excel AddIn must have secRMM installed on it and the secRMM SCCMConnection property must be configured for this option to work properly.

Connect to another computer
Use this button to connect to a computer running the secRMM product or secRMMCentral. If you connect to a remote computer, you can specify a User Id and Password if necessary. Note that for User Id, you can use NetBios notation to prefix the User Id with either a domain name or with a computer name. Once you select the computer you want to connect to, you can use the “Test” button in the lower left hand corner of the dialog to verify that the information you provided to connect to the computer is valid. The dialog that is displayed when you press the “Test” button is shown below. If the test fails, you should begin troubleshooting by first validating the information you provided. A common mistake is that the userid you specified is not an Administrator on the computer you specified. Also, check the event logs on the remote computer for security errors.
The “Test connectivity” dialog provides 2 tests. One is to read the event logs while the other is to allow you to issue authorization commands to secRMM (and to view or change other controlling properties of secRMM).
Control

<table>
<thead>
<tr>
<th>Get existing data</th>
<th>Get existing data - multiple</th>
<th>Charts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get existing data filtered</td>
<td>Receive new events</td>
<td>Freeze</td>
</tr>
<tr>
<td>Clear Worksheet</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

33 - secRMM Ribbon Control group

The secRMM Ribbon Control group allows you to retrieve data from the data source you selected in the “Data source” group. You also can specify whether you want to take static snapshots of the data or allow the Excel Worksheet to receive new secRMM events in real-time (“Receive new events” checkbox). Lastly, you have a function to clear the worksheet.

Get existing data button

Use this button to get the data from the event log you specified in the Data source group (i.e. from the secRMM or secRMMCentral event log).

Get existing data filtered

![secRMM Get Existing Data Using Filter](image)

Use this button to get a subset of the data from the event log you specified in the Data source group (i.e. from the secRMM or secRMMCentral event log). You define the subset of data by specifying a start time and end time. The data returned is between this start time and end time.

Clear Worksheet button

Use this button to clear the data out of the active Worksheet.

Get existing data from multiple computers
Use this button to get the data from the secRMM event log on multiple computers. You put one computer name per line in the windows. If you have an existing list of computer names, you can use the import button.

*Receive new events Checkbox*

Check this checkbox if you want to receive new secRMM events into the active Worksheet.

*Freeze button*

This button acts as a toggle to freeze and unfreeze the “Receive new events” function.

*Charts button*

This button allows you to chart the secRMM data.

The secRMM Ribbon Administration group lets you control the secRMM software on the computer that you are connected to in the “Data source” group. This allows you to control either the local computer you are running Excel on or another computer in your environment.
Authorization button

The list of secRMM properties and their values are displayed. You can click the editable properties to change the value. Note that from this dialog, you can also invoke the SafeCopy Approver and Device Tracker programs. One limitation of using the Authorization dialog from within the secRMM Excel AddIn is that you can only change the secRMM computer configuration. If you want to change a secRMM user configuration, you must use the secRMM MMC. Also, since EnableRMS, SCCMConnection and SendEmail take passwords, these secRMM properties cannot be changed in the Excel AddIn.

![secRMM Authorization dialog](image)

If you receive an error using the Authorization button, check the computer you are working with to ensure the firewall has been opened for remote administration. The error you will see is most likely “The RPC server is unavailable” (shown below). To resolve this error, type the following command on the computer you are working with: `Netsh firewall set service RemoteAdmin`. 
Filter

The secRMM Ribbon Filter group lets you control what secRMM events are displayed in the active Worksheet and also to control the level of detail for each secRMM event in the active Worksheet.

### Event types

**All Checkbox**

Check this checkbox to show all the secRMM events in the active Worksheet.

**Online/Offline Checkbox**

Check this checkbox to show secRMM Online/Offline events in the active Worksheet. When a Removable Media Device is plugged in and the Windows Operating System recognizes it, a secRMM Online event occurs. When a Removable Media Device is unplugged and the Windows Operating System removes it from its list of active devices, a secRMM Offline event occurs.

**Writes Checkbox**

Check this checkbox to show secRMM write events in the active Worksheet. A secRMM write event is generated when data is written to a Removable Media Device.

**Write Authorization failures Checkbox**

Check this checkbox to show secRMM write authorization failures. A secRMM write authorization failure is a secRMM event that fails a write attempt to a Removable Media Device due to a secRMM authorization rule. A secRMM authorization rule is based upon one or more criteria:

1. User Id
2. Program

By selecting the appropriate checkboxes, you can control what secRMM events are displayed in the active Worksheet.
3. Removable Media Device serial number

**Administration Checkbox**

Check this checkbox to show secRMM Administration events. A secRMM Administration event is an event which logs when an Administrator changes one of the secRMM authorization rules or any of the properties which control how the secRMM program behaves.

**SafeCopy Checkbox**

Check this checkbox to show the secRMM SafeCopy events. A secRMM SafeCopy event is an event which logs when an end-user is using removable media.

**Detail level**

**Simple Checkbox**

Check this checkbox to display the secRMM data at an Executive level. Specifics about the secRMM events are hidden.

**Detailed Checkbox**

Check this checkbox to display all of the secRMM event data.

**secRMM Excel Data Columns**

This section lists and describes the Excel columns that are defined in the secRMM Excel Workbook. All of this data is derived from the secRMM or secRMMCentral event logs. From anywhere in the Workbook, you can double click a row to show that row in its own windows as shown below.
40 - Viewing a single row of the Worksheet

<table>
<thead>

### Contacting Squadra Technologies Support

Squadra Technologies Support is available to customers who have purchased a commercial version of seCRMM and have a valid maintenance contract or who are in a trial mode of the product. When you contact Support please include the following information:

1. The version of seCRMM you have installed.
2. The Windows versions you have installed: XP, 2003 Server, 2008 Server R2, Vista, Windows 7, etc.
3. Whether the Windows Operating System is 32bit or 64bit.
4. The specific issue you are contacting support for.

### About Squadra Technologies, LLC.

Squadra Technologies delivers innovative products that help organizations get more data protection within the computer infrastructure. Through a deep expertise in IT operations and a continued focus on what works best, Squadra Technologies is helping customers worldwide.
